Ratings & Reviews

Hari ★★★★★

 Automatic transmissions are slowly becoming the favoured choice for four-wheeler buyers in India. To benefit from demand, carmakers are adding these gearboxes to as many models in their line-up as possible. Tata's latest is its sub-four metre Tigor. When first introduced, the car impressed many with its styling and interiors. This car can now be had with the AMT transmission that is seen in the [Tiago](https://www.droomdiscovery.com/new-cars/tata-tiago). But, like in the Tiago, this gearbox can only be had with the 1.2-litre petrol motor.

Firstly, this car has the creep function, this helps a lot in traffic conditions, allowing you to go ahead without throttle input. However, there is a little judder which can be felt at low speeds. But, once you begin speeding up, the gearshifts smoothen out. Being an AMT, the shifts are slightly slow.

 Similar to the Tiago, the [Tigor](https://www.droomdiscovery.com/new-cars/tata-tigor) has two driving modes – City and Sport. Sport considerably changes the performance however, in City mode; the gearbox is slow and relaxed which is fine if you are in bumper-to-bumper traffic. However, if you are cruising at higher speeds, the delay in shifts affects overtaking. Overall, the car feels much better to drive in Sport mode but the shifts are still not fast enough.

 In terms of performance, the Tigor takes 17.7 seconds to reach 0-100kph. This is slow, even after being in Sport mode. In City mode, it is slower by around 3 seconds and this isn't impressive. The car does manage to shift gears faster in Sport mode.

The Orange Book Value or any pricing or valuation mentioned in the report is an indicative pricing, generated based on proprietary patented methodology of Droom and/ or its affiliates/partners/subsidiaries. The actual price of the vehicle/ mobile device may vary based on actual condition of the vehicle/ mobile device and several other parameters. Droom cannot be held responsible for any losses incurred or liabilities arising by the party relying on this report.

However, the earlier upshifting City mode helps with fuel economy. One can also drive the car in manual mode; this allows you to shift gears yourself.

To get the most out of the Tigor AMT, one has to leave it in Sport mode and use the throttle pedal with a light foot. It is when you drive the car at moderate rpms, the gearbox works the best. It keeps you in the correct gear at most times. It is also easy to reverse this car since the car is equipped with the creep function. However, the car does need delicate throttle input. The power delivery is sudden and not smooth.

The Indian carmaker has surely entered a new segment with the Tigor AMT. It is available in two trim levels – XTA – mid-spec trim with just enough features and XZA – a model that is full-loaded. They are priced at ₹5.82 lakh and ₹6.30 lakh (ex-showroom, Delhi) respectively.

Should I buy one?

Tata's Tigor AMT isn't as sorted as its biggest rival, the Maruti Dzire AGS. The Maruti is smoother, a better performer and has more features. However, it costs close to ₹1 lakh more. Interestingly, the Tigor is the cheapest in the segment but it doesn't feel like it. Which makes the car extremely good value for money, and many would overlook its few niggles at its price point.

Component Health Check

A vehicle undergoes enormous wear and tear with time. It is often imperative to inspect and replace parts of the vehicle on a timely basis to keep it in prime condition. These aspects often go unnoticed and become real pain points with time. Use the Component Health Check for maintaining your vehicle components without any hassles. It would provide the list of parts to be inspected every subsequent year based on their age to help you find out the parts needing replacement.

*This is a suggestive list and is not based on the actual physical inspection of this vehicle
