Ratings & Reviews

Hari

 The new Leaf is the follow-up to the world's best-selling electric car, and is a model that you just might see on sale in India in the not-too-distant future. We're in Vegas to drive the car and the plan is to take it around 80km outside the city, take a few shots and come back. For a 160km round trip in an electric car, this should traditionally have you worried — not anymore says Nissan's team. The new Leaf promises a range of 240-400km on a single charge and its 40kWh battery pack takes eight hours to charge fully. Fast charging gives the battery pack up to 80 percent in 40 min.

 The Leaf's cabin is inspired by other [Nissan's](https://www.droomdiscovery.com/new-cars/nissan) and is fairly neat and straightforward. We hop in and slot the car in D mode and set off. It takes time to get used to a car that makes no noise. Once we hit the freeway, the Leaf holds onto speeds of upto 110kph and it builds pace quite well. Initial acceleration is strong, and it responds to inputs really well. The car uses a 110kW (about 150hp) electric motor (the old Leaf made 80kW or 109hp) that is very refined.

 The car has a unique 'e-Pedal' feature that maximises regenerative braking, so taking your foot off the accelerator pedal has the same effect as mild braking. For more braking power, you can use the traditional brake pedal. The e-pedal feels almost natural and is very easy to get used to — it's something Indian drivers would love. The steering isn't very involving but we weren't expecting it to be really. The car comes with ProPilot -

Nissan calls it a 'single-lane autonomous driving technology'. This tech uses adaptive cruise control with lane-keep assist and, in this mode, the Leaf will adjust its speed in reference to the car ahead and will keep your car centred to the lane. You can take your hands off the wheel and let the car do the driving.

 This Leaf's styling doesn't stand out as much as the previous car did, in fact this looks like a car that will blend into the existing range of fossil-fuel-powered cars. And, it's practical too, with a large boot, though rear seat passengers might find the floor set a bit high.

So, when is the car coming here? Right now, Nissan is evaluating the feasibility - it will be brought in as an import and will cost about as much as a luxury sedan. Plus, India needs a lot more charging stations before this car makes practical sense to drive here.

Component Health Check

A vehicle undergoes enormous wear and tear with time. It is often imperative to inspect and replace parts of the vehicle on a timely basis to keep it in prime condition. These aspects often go unnoticed and become real pain points with time. Use the Component Health Check for maintaining your vehicle components without any hassles. It would provide the list of parts to be inspected every subsequent year based on their age to help you find out the parts needing replacement.

*This is a suggestive list and is not based on the actual physical inspection of this vehicle
